The Seven-step Process for Basic Electrical Troubleshooting

Step four of the seven-step troubleshooting approach is *Identifying the Source of the Problem*. Identifying the source of the problem requires the technician to:

- Isolate components and evaluate circuit parameters
- Isolate the circuit by group when dealing with a complicated circuit (half step approach)
- Identify the malfunctioning component using the recorded data

To read more about this step and see it applied to a boiler feed pump example, read the Basic Electrical Troubleshooting document at <http://www.pdma.com/pdfs/Articles/Troubleshooting.pdf>.

Over the next four weeks we are going to detail each step. Next week's topic will be *Correcting/Repairing the Component*.

You are invited to submit an Electric Motor Testing Tip of your own and receive a free PdMA mug or hat if we publish it! Contact Lou at 813-621-6463 ext. 126 or lou@pdma.com.
