

A Leader in Electric Motor Testing

Tip Of The Week

May 5, 2014

Summer Is Approaching

The summer months are approaching fast, and as we know, high ambient temperatures can shorten motor life. Inspect and clean your motor ventilation systems as needed because warm days along with poor ventilation will certainly cause insulation degradation. With that said, it is now a good time to review your summer planned shutdowns. Preparing for your outage(s) should include a review of your test equipment and tools, re-testing and inspection of your critical assets, and of course time allotted for an inspection of the motor ventilation systems.

To hear details and see data on a case study involving poor ventilation and the effects on motor insulation visit our website at www.pdma.com and listen to the latest case study "Some Like it Hot, But Not This Hot!"

You are invited to submit an Electric Motor Testing Tip of your own and receive a free PdMA® mug or hat if we publish it! Contact Lou at 813-621-6463 ext. 126 or lou@pdma.com.
