

Tip Of The Week

April 8, 2013

Think Baseline

Best in class reliability programs perform regular testing to monitor for changes in the condition of their motors. Baseline comparisons make this job much easier. Upon starting a reliability program or following the installation of a new motor, best in class companies will perform a baseline test. These same companies will perform incoming tests and create a new baseline upon receiving a motor from the repair shop. They will then use this new baseline to compare future tests against. To make the job easier for the technician and analyst, MCEGold allows you to designate a new baseline test directly from the Test History. All future tests will then automatically be compared against the new baseline test.

You are invited to submit an Electric Motor Testing Tip of your own and receive a free PdMA mug or hat if we publish it! Contact Lou at 813-621-6463 ext. 126 or lou@pdma.com.
