

A Leader in Electric Motor Testing

Tip Of The Week

October 10, 2016

Head in the Clouds?

The phrase **head in the clouds** may have an alternate meaning in today's maintenance and reliability environment. Big data, network security, data analytics and access anywhere at any time are a few of the hurdles being faced by facilities trying to manage reliability in today's competitive economic times. One solution is to move the data to the cloud. Placing reliability data in the cloud removes the IT burden of facility network security and storage issues. It also provides access to the data for analysts to those who need it at anytime from anywhere. So if you hear your maintenance supervisor telling the analyst to "Get your head in the clouds!" it may be a good thing.
