Better Reliability...Better Safety

In continuing the safety theme presented last week, studies presented by Ron Moore from The RM Group, Inc. indicate a divergence in equipment reliability and injury rate. The study shows that as Overall Equipment Effectiveness (OEE) increases the injury rate decreases. Another interesting correlation is the comparison between reactive and predictive maintenance strategies versus number of injuries. Increases in corrective/reactive work orders correlated to an increase in injury rate for the same period of time. However, increases in preventive/predictive work orders resulted in a decrease in injury rate.

For more details on the correlation between reliability and safety contact The RM Group, Inc. at 865-675-7647 or email them at RonsRMGp@aol.com.

You are invited to submit an Electric Motor Testing Tip of your own and receive a free PdMA mug or hat if we publish it! Contact Lou at 813-621-6463 ext. 126 or lou@pdma.com.
