

A Leader in Electric Motor Testing

# Tip Of The Week

---

June 2, 2014

## Who Has The Time?

Often with limited resources and time to accomplish all the tasks necessary to keep our facility running and reliable it is easy to overlook a critical task that comes back to bite us at the least opportune time.

When it comes to electric motor testing tasks, remember to use the tools that are available for assisting you in establishing the criticality or severity of your assets. As an example the PdMA MCEGold<sup>®</sup> software offers an asset criticality selection in the WatchList and Condition Code Summary reports for all of the assets in your database. Additionally, from the Site Condition window with just a push of a button you can organize a list of motors that have yet to be analyzed or are in severe condition. From there it becomes easy to assign an analyst to validate the condition of the asset and determine if any tasks are necessary.

You are invited to submit an Electric Motor Testing Tip of your own and receive a free PdMA<sup>®</sup> mug or hat if we publish it! Contact Lou at 813-621-6463 ext. 126 or [lou@pdma.com](mailto:lou@pdma.com).
